

Toyota A90 / A91 Supra

SPLASH GUARD INSTALLATION

FRONT GUARDS

TOOLS

3/32" punch • included

Rivet installation tool

Mallet or hammer

STEP-BY-STEP

- 1 Turn the wheel toward the side you will install first. Turn right to install the front-right guard.
- 2 Use the punch and a mallet or hammer to push in the center of each of the four factory rivets.
- 3 **These take FORCE to remove. The rivet centers will fall behind the fender liner. There is no need to retrieve them; they will not cause noise or other issues.**
- 4 Position the guard. Working top to bottom, squeeze each replacement rivet with the rivet tool until its stem breaks off. Keep the slots centered vertically on the rivets.
- 5 Fine-tune the guard position by pulling it gently inward or outward.

INSTALLER NOTE

Because the guard material is flexible, adjust the width at each slot to create a perfectly straight outer edge and prevent warping.

REMOVE THE FOUR FACTORY RIVETS

SET EACH REPLACEMENT RIVET WITH THE INSTALLATION TOOL

Toyota A90 / A91 Supra

SPLASH GUARD INSTALLATION

REAR GUARDS

TOOLS

Floor jack • or remove wheel

8 mm deep socket

Small ratchet / short extension

17 mm socket + torque wrench (optional)

WHEEL SOCKET SIZE

17 mm

WHEEL LUG TORQUE

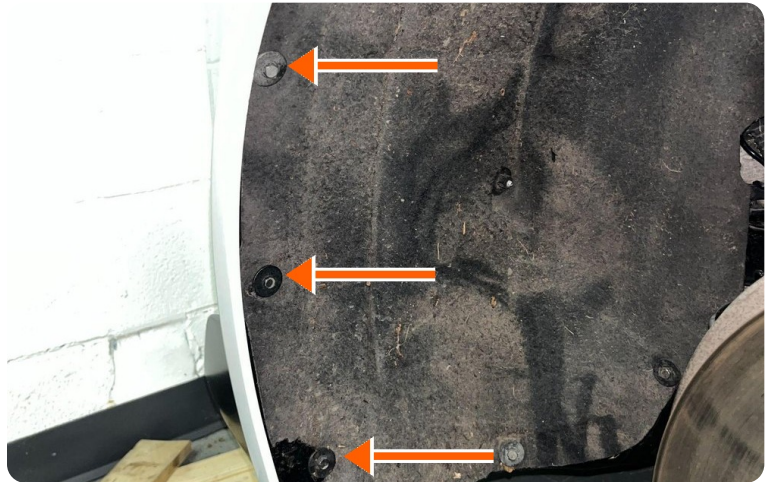

101 lb-ft

STEP-BY-STEP

- 1 Raise the rear wheel with a floor jack, or remove the wheel for the best access to the three 8 mm screws.
- 2 Remove the three factory screws shown. A deep socket or short extension works best if the wheel remains installed.
- 3 Position the guard and reinstall the screws. The top screw is the most difficult because of the bracket depth.
- 4 Snug the screws only. Do not overtighten them into their plastic anchors.

INSTALLER NOTE

The inside face of the guards may have some surface scratches. These are not permanent and can be cleaned with tire shine or plastic detailer.
